Problem – Solution Fit

The Customer Registry System addresses the challenges users face while registering complaints and tracking their status through manual processes. Existing methods often result in delays, lack of transparency, and difficulty in accessing updates. Our proposed MERN Stack solution provides a secure, centralized platform for complaint registration, status tracking, and communication between customers and administrators. This ensures faster service delivery, better record management, and an improved user experience.

Purpose

- To provide a secure and user-friendly platform for customer registration and complaint management.
- To reduce manual paperwork and improve the efficiency of handling customer requests.
- To enable customers to track their complaint status in real time with complete transparency.
- To help administrators manage complaints efficiently through a centralized dashboard.
- To improve customer satisfaction by providing faster, reliable, and organized service.

1. CUSTOMER SEGMENTS • Citizens• Registered Customers• Complaint Users	6. CUSTOMER CONSTRAINTS • Poor internet• Login issues• Limited technical knowledge	5. AVAILABLE SOLUTIONS • Office complaint desk• Phone support• Email support
2. JOBS-TO-BE-DONE • Register account• Submit complaint• Track complaint• Give feedback	9. PROBLEM ROOT CAUSE • Manual paperwork• Delayed updates• Lack of transparency	7. BEHAVIOUR • Visit office• Call customer care• Repeated follow-ups
