Team Members	Jyothi Swaroop, Bhu Mahesh, Mohith
Project Name	Customer Registry System
Maximum Marks	2 Marks

Proposed Solution

The proposed solution provides a secure and centralized Customer Registry System developed using the MERN Stack. It enables customers to register, submit complaints, track complaint status, and receive updates while allowing administrators to manage requests efficiently.

S.No	Parameter	Description
1	Problem Statement	Manual complaint handling is slow, lacks transparency, and makes it difficult for customers to track request status.
2	Idea / Solution Description	Develop a MERN Stack web application with secure login, complaint registration, real-time status tracking, admin dashboard, and feedback module.
3	Novelty / Uniqueness	Centralized complaint management with role-based access, live status updates, digital records, and responsive design.
4	Social Impact / Customer Satisfaction	Improves service quality, reduces waiting time, increases transparency, and enhances customer trust.
5	Business Model	Can be adopted by organizations on a subscription or licensing basis with optional maintenance and cloud hosting services.
6	Scalability of the Solution	Supports multiple departments, thousands of users, cloud deployment, and future integration with mobile apps and analytics.
